PROF. ANDY PAVLO

Homework #2 (by Ian Romines)
Due: **Sunday October 4, 2020 @ 11:59pm**

IMPORTANT:

- Upload this PDF with your answers to **Gradescope by 11:59pm on Sunday October 4, 2020.**
- **Plagiarism:** Homework may be discussed with other students, but all homework is to be completed **individually**.
- **You have to use this PDF for all of your answers.**

For your information:

- Graded out of **100** points; **4** questions total
- Rough time estimate: \approx 1-4 hours (0.5-1 hours for each question)

Revision : 2020/09/29 10:44

Question	Points	Score
Cuckoo Hashing	20	
B+Tree	45	
Extendible Hashing	25	
Suffix Trees	10	
Total:	100	

Question 1: Cuckoo Hashing.....[20 points]

Consider the following cuckoo hashing schema:

1. Both tables have a size of 4.
2. The hashing function of the first table returns the lowest two bits: $h_1(x) = x \& 0b11$.
3. The hashing function of the second table returns the next two bits: $h_2(x) = (x >> 2) \& 0b11$
4. When replacement is necessary, first select an element in the second table.
5. The original content is shown in Figure 1.

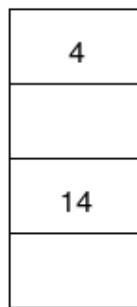

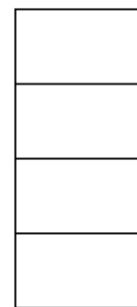

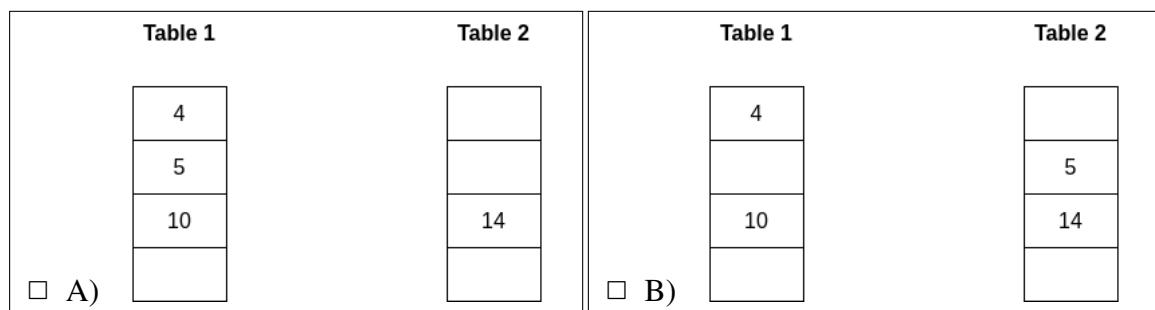

Table 1**Table 2**

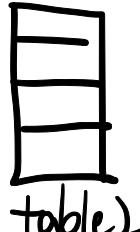

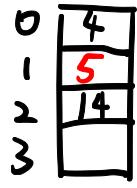

Figure 1: Initial contents of the hash tables.

- (a) [4 points] Insert keys 5 and 10. Select the resulting two tables.

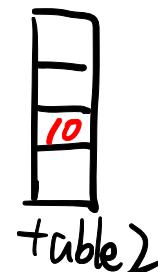

C

① insert 5, $\text{hash}_1(5)=1$ ② insert 10, $\text{hash}_1(10)=2$ occupied
thus go table 2, $\text{hash}_2(10)=2$

therefore

therefore

Question 1 continues...

Table 1	Table 2	Table 1	Table 2																	
<input checked="" type="checkbox"/> C)  <table border="1"> <tr><td>4</td></tr> <tr><td>5</td></tr> <tr><td>14</td></tr> <tr><td></td></tr> </table>	4	5	14		<table border="1"> <tr><td></td></tr> <tr><td></td></tr> <tr><td>10</td></tr> <tr><td></td></tr> </table>			10		<table border="1"> <tr><td></td></tr> <tr><td></td></tr> <tr><td>4</td></tr> <tr><td>14</td></tr> <tr><td></td></tr> </table>			4	14		<table border="1"> <tr><td></td></tr> <tr><td>5</td></tr> <tr><td>10</td></tr> <tr><td></td></tr> </table>		5	10

① delete 14 : hash₁(14)=2

① insert 8 hash₁(8)=0_x occupied

hash₂(8)=2 x 0_x occupied

take 10 : hash₁(10)=2, empty ✓

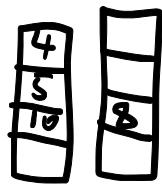

therefore choose B

Question 1 continues...

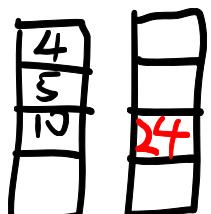

(c) [6 points] Finally, insert 24. Select the resulting two tables.

Ob 0001 1001

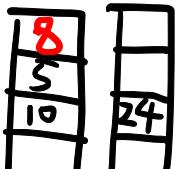

$$\text{hash}_1(24) = 0$$

$$\text{hash}_2(24) = 2$$

$$\text{hash}_1(8) = 0$$

$$\text{hash}_2(4) = 1$$

	Table 1	Table 2	Table 1	Table 2												
A)	<table border="1"> <tr><td>8</td></tr> <tr><td>5</td></tr> <tr><td>10</td></tr> <tr><td></td></tr> </table>	8	5	10			<table border="1"> <tr><td>4</td></tr> <tr><td></td></tr> <tr><td></td></tr> </table>	4

(d) [6 points] What is the smallest key that potentially causes an infinite loop given the tables in (c)

- 0 2 3 6 7 9 None of the above

$$h_1(0) = 0 \times$$

$$h_2(0) = 0 \checkmark$$

$$h_1(1) = 2 \times$$

$$h_2(1) = 0 \checkmark$$

$$h_1(2) = 3 \times$$

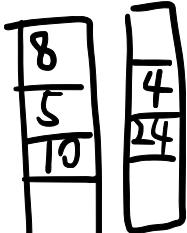

$$h_2(2) = 0 \checkmark$$

$$h_1(3) = 5 \times$$

$$h_2(3) = 0 \checkmark$$

$$h_1(4) = 2 \times$$

$$h_2(4) = 1 \times$$

Question 2: B+Tree.....[45 points]

Consider the following B+tree.

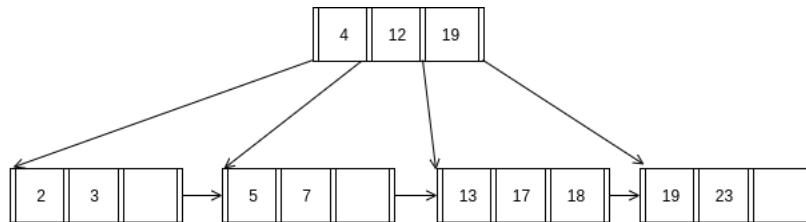

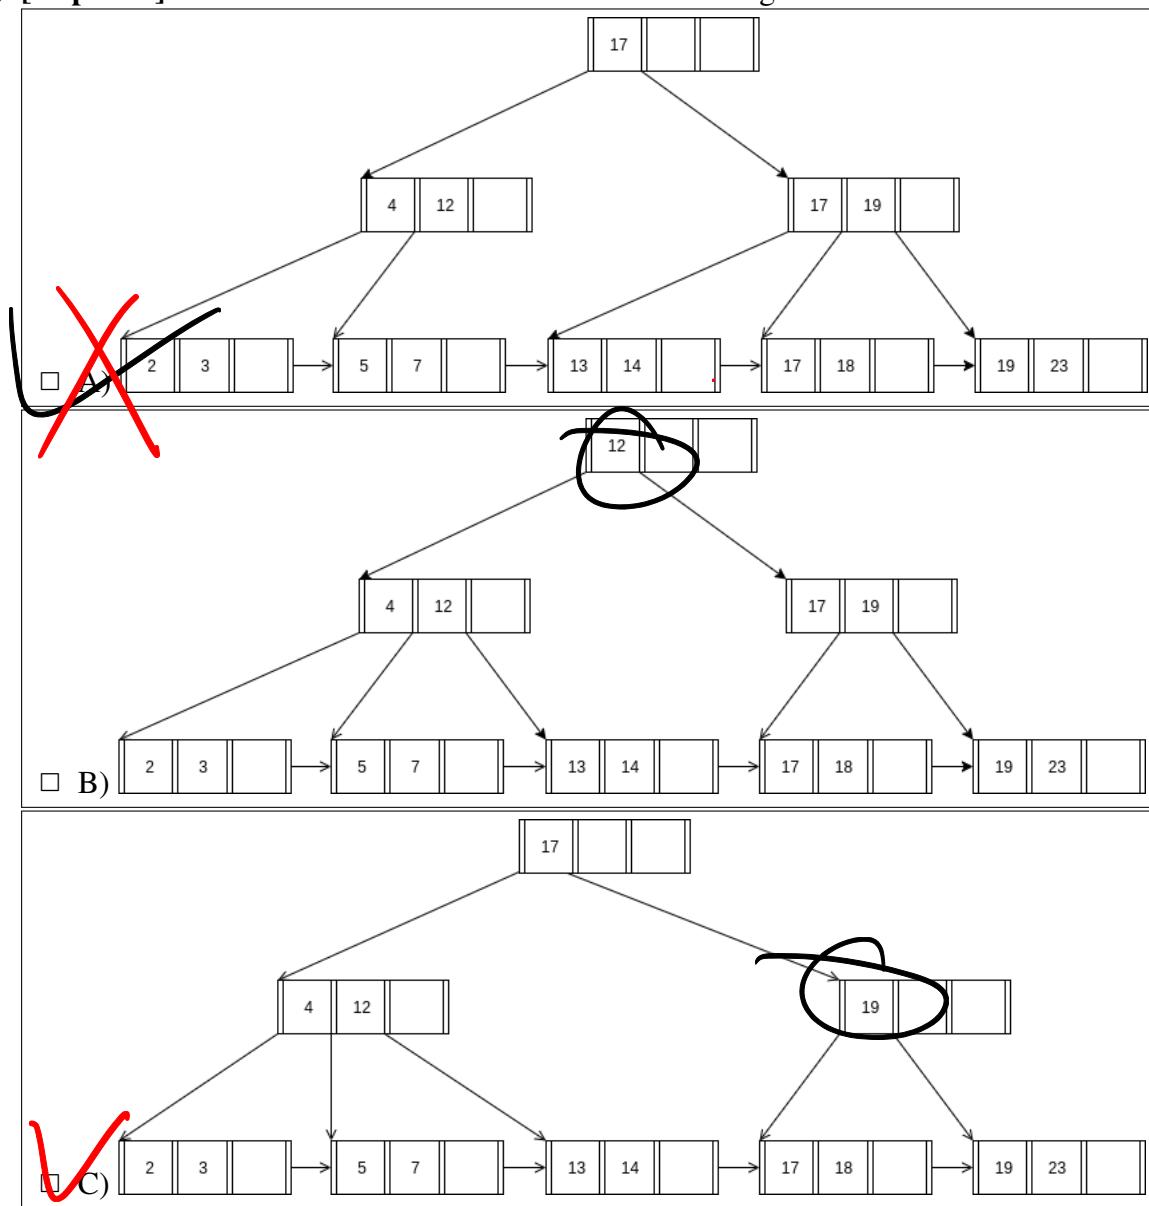

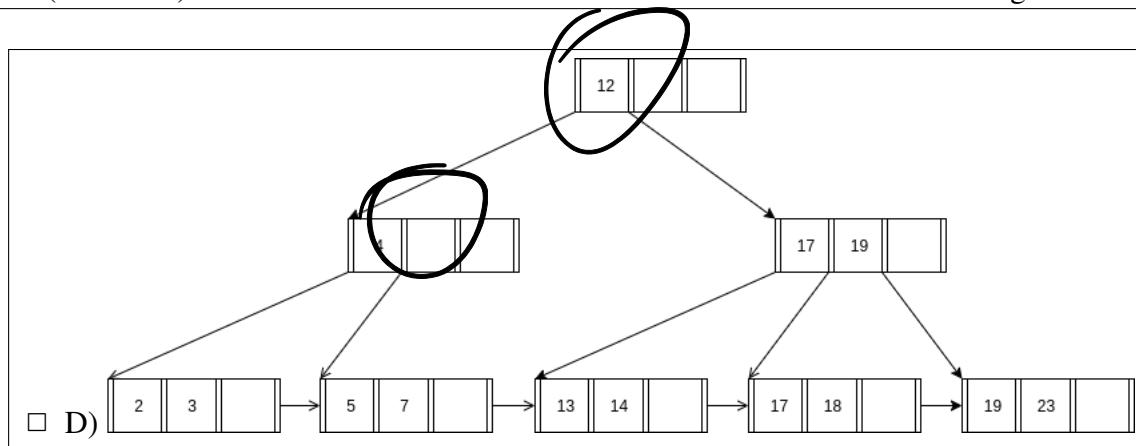

Figure 2: B+ Tree of order $d = 4$ and height $h = 2$.

When answering the following questions, be sure to follow the procedures described in class and in your textbook. You can make the following assumptions:

- A left pointer in an internal node guides towards keys $<$ than its corresponding key, while a right pointer guides towards keys \geq .
- A leaf node underflows when the number of **keys** goes below $\lceil \frac{d-1}{2} \rceil$.
- An internal node underflows when the number of **pointers** goes below $\lceil \frac{d}{2} \rceil$.

(a) [15 points] Insert 14* into the B+tree. Select the resulting tree.

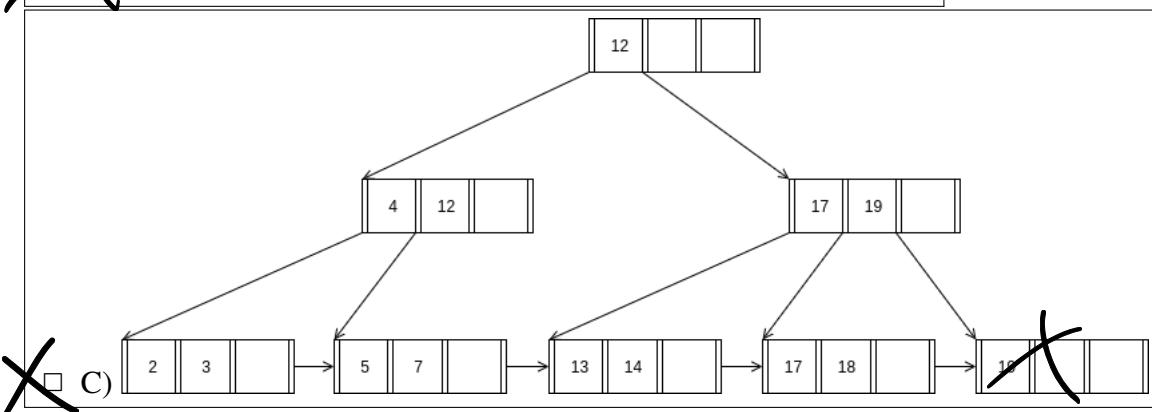

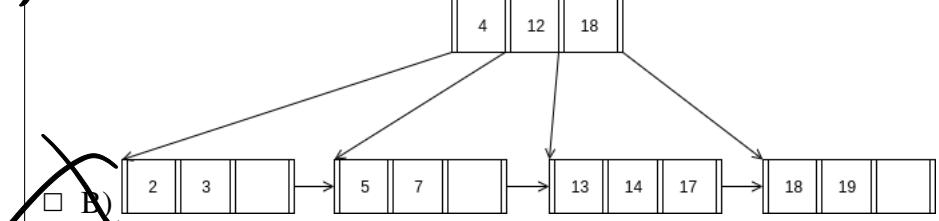

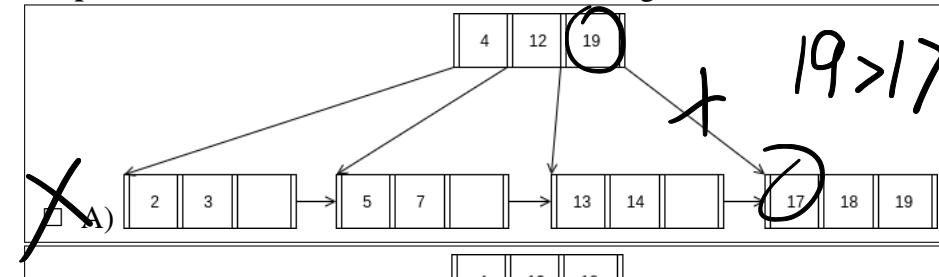

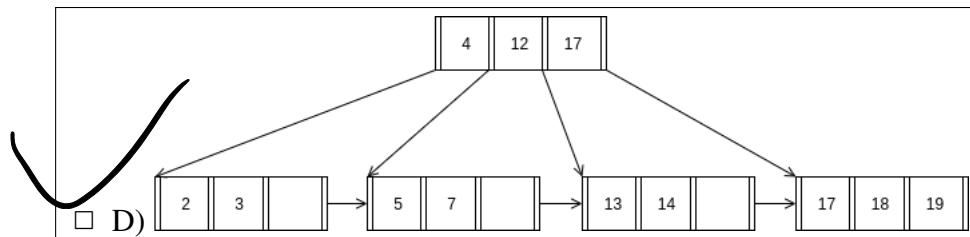

- (b) [5 points] How many pointers (parent-to-child and sibling-to-sibling) do you chase to find all keys between 5 and 15?

2 3 4 5 6 7

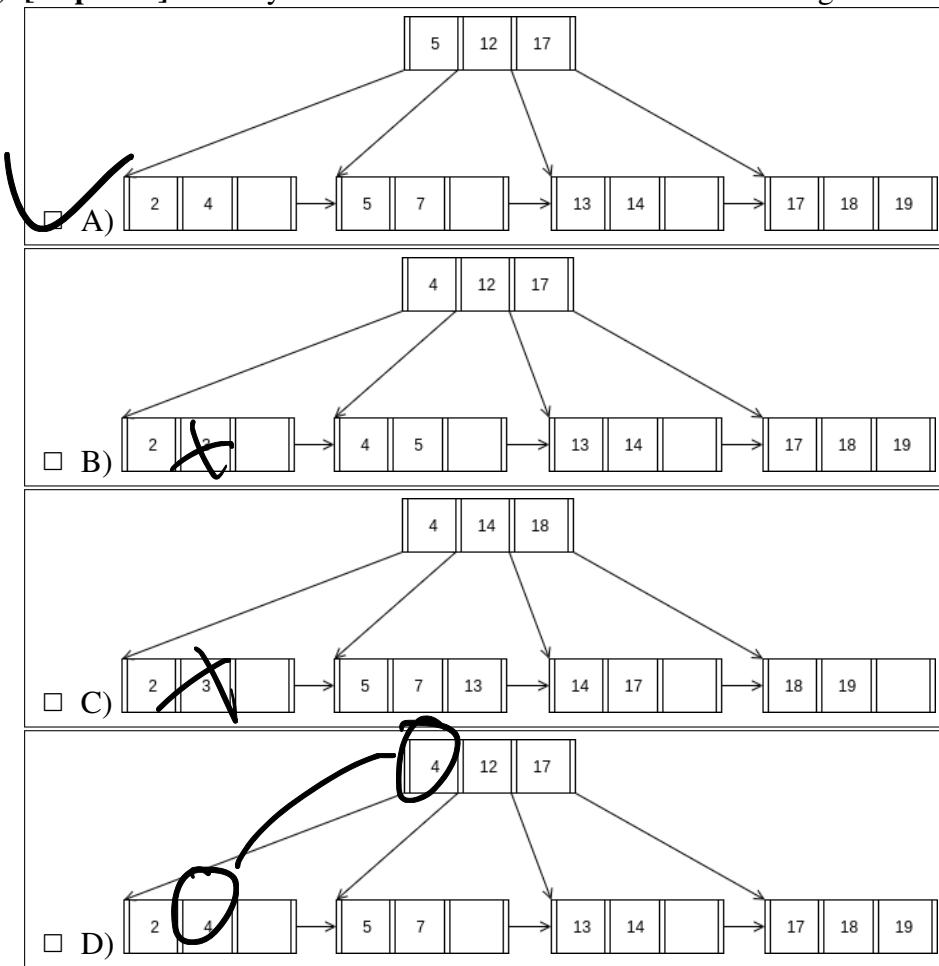

- (c) [15 points] Then delete 23*. Select the resulting tree.

less than half

- (d) [10 points] Finally insert 4^* and delete 3^* . Select the resulting tree.

Question 3: Extendible Hashing.....[25 points]

Consider an extendible hashing structure such that:

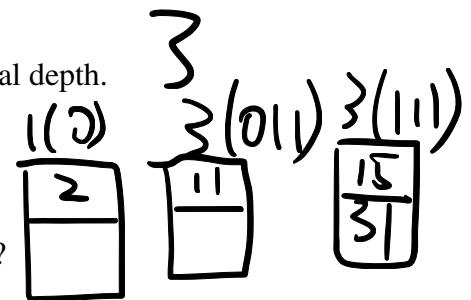

- Each bucket can hold up to two records.
- The hashing function uses the lowest g bits, where g is the global depth.

(a) Starting from an empty table, insert keys 15, 2, 31, 11.

- i. [3 points] What is the global depth of the resulting table?
 0 1 2 3 4 None of the above

- ii. [3 points] What is the local depth the bucket containing 2?
 0 1 2 3 4 None of the above

- iii. [3 points] What is the local depth of the bucket containing 31?
 0 1 2 3 4 None of the above

(b) Starting from the result in (a), you insert keys 6, 9, 23, 12, 11.

- i. [4 points] Which key will first cause a split (without doubling the size of the table)?
 6 9 23 12 11 None of the above

- ii. [4 points] Which key will first make the table double in size?
 6 9 23 12 11 None of the above

*overflow → split
global + 1 → double*

(c) Now consider the table below, along with the following deletion rules:

1. If two buckets have the same local depth d , and share the first $d - 1$ bits of their indexes (e.g. 010 and 110 share the first 2 bits), then they can be merged if the total capacity fits in a single bucket. The resulting local depth is $d - 1$.
2. If the global depth g becomes strictly greater than all local depths, then the table can be halved in size. The resulting global depth is $g - 1$.

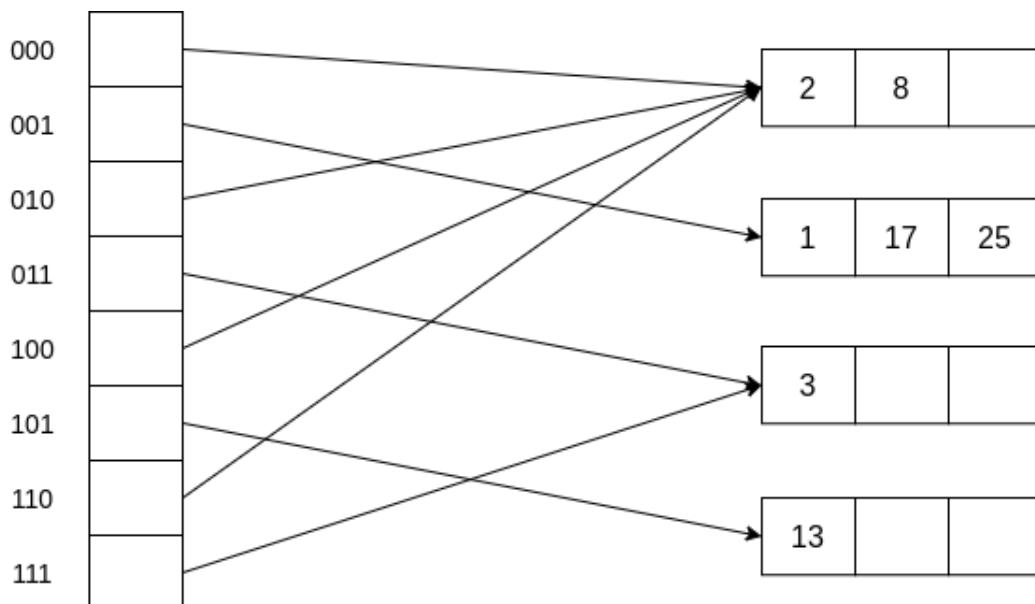

Figure 3: Extendible Hash Table along with the indexes of each bucket

Starting from the table above, delete keys 3, 8, 1, 2, 17.

- i. [4 points] Which deletion first causes a reduction in a local depth.

3 8 1 2 17 None of the above

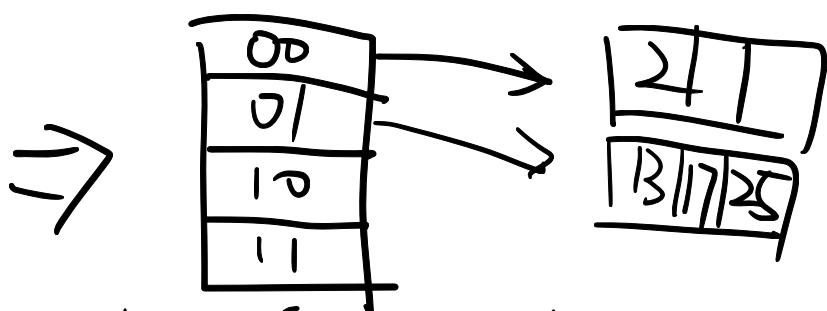

- ii. [4 points] Which deletion first causes a reduction in global depth.

3 8 1 2 17 None of the above

delete 3 can't merge

delete 8 can't merge

delete 1 merge { 00 }
 10 |

therefore delete 1 would cause reduction

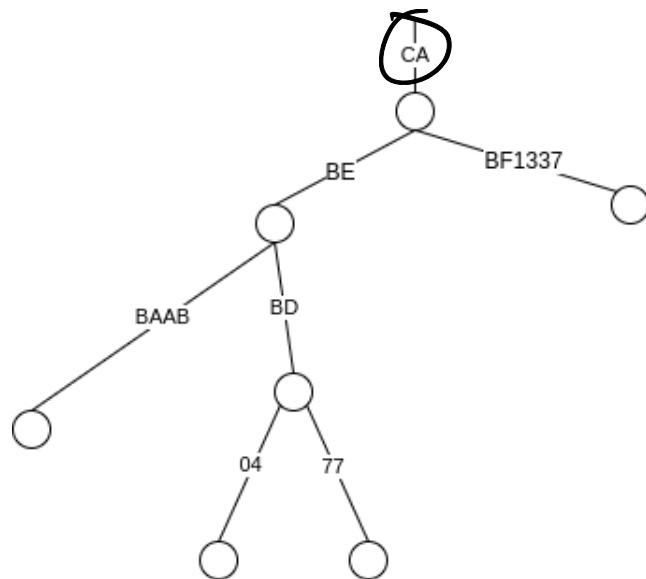

Question 4: Suffix Trees [10 points]Consider the following suffix tree for **unsigned 32-bit integers**.

Figure 4: Suffix Tree

starts with CA

- (a) [3 points] Which of the following elements belong to the suffix tree. Select all that apply.
- 0xCABEACCA 0xCA1337BF 0x77BDBECA 0xBAABCABE 0xCABEB04
 None of the above

- (b) [7 points] Insert the key 0xCABEBADE. Select the resulting tree.
